# ECO-AQUA™ SINGLE BAG OYSTER FLOAT

**Features:**

UV Stabilized Virgin Plastic  
Built to Growers' Specifications  
Robust Design  
For Shallow Water Applications  
Quality Assurance Manufactured

**Benefits:**

Built for Floating Oyster Bags  
Cost Effective  
Increased Productivity  
Easy to Remove and Replace  
For All Farming Applications

Eco-Aqua™ 04-S floats mount flush onto Go Deep oyster bags, creating a compact growing system. The floats are designed to be attached to the bag which provides oysters with increased food for growth and greater bag height if in the de-fouling position.

The molded ribs of the Eco-Aqua™ 04-S oyster float aid in secure attachment to the oyster bags. They provide time tested flotation for single-bag long line systems. Many Eco-Aqua 04-S floats manufactured 20+ years ago are still in use today.

As part of a four or six bag system, Eco-Aqua™ 04-S floats provide counter buoyancy when sinking. Attached to the top of the structure, the extra flotation keeps the cage in an upright position, ensuring that the system lands on-bottom in the proper orientation.
